UNIVERSITY OF CALIFORNIA
DEPARTMENT OF BOTANY
BERKELEY

November 10th, Thursday.

Dear Munz:-

I have been keeping the fern MS all the time expecting that I would be soon going down to Standford but the chances for mre to do that seem to be getting less and less probable - that is at an early date. I am sending it back to you now for in your hands it certainly can be growing which it certainly will not if it does not receive any more attention than it has during the last week or so.while in my hands. I am enclosing the list of UC herb records and will get off to you the Academy records as soon as I can get over there again and finish them up. I finally got the Kendell paper into Mrs Hall's hands but I have not heard what she thot;as soon as I do I will let you know. She told me that the thick polypody seems to be pretty certainly the unnamed form;she has gotten scraps from Russia. She will be getting ready to publish so that the Kendell paper might well come out with it. By the way the Smiley Sierra paper is out and he has the Sierran ferns keyed out;look it up. Drop me a line when you get time.

Sincerely,

Ivan M. Johnston

Friday evening 5 P.M.

Here is the Fern dope I have smoked. A Jepsonian student has the fern material over at the Bot Bldg and I have not been able to get at it but they say it surely will be back the first of next week and then I will get the notes Woodsia Gymnogramme etc notes down to you at once. I have all the plant determined that I looks up with me except that Sedalea-like Malvaceous beast which I have temporarily given up as Mr Brandy has finally. None up here knows it off hand. That Clayonia is a new var. I have all the descriptions done with the exception of one Galium and will ship you the MS. Well write you later Had smooth trips up coast. How was Monday?

(It is not Sedalea.)

JM
